

Ruffer Total Return International

Positive returns with low volatility

I class February 2019 Issue 92

During February, the fund price fell by 2.6%. This compared with a rise of 2.3% in the FTSE All-Share Index and a decline of 0.9% in the FTSE Govt All Stocks Index (all figures total returns in sterling).

We are positioned to capture some of the bounce in markets, but we have not compromised on protection in order to achieve this. In January this was reasonably effective (+3%) but in February protective assets have been a drag on performance. Following recent meetings, we have decided to share our answers to some common questions.

Given your cautious outlook, why do you hold high-beta cyclical businesses? We have a low weighting to equities (41%). Their role is to make us money if we are wrong (or early) in having a cautious outlook and they need to punch hard to offset the cost of protective assets. A sustained rally in markets (not our core thesis) will be driven by supportive monetary policy or a stronger-for-longer economy – an environment where cyclical businesses will benefit most. This scenario is also likely to see an initial period of rising real interest rates, which would hurt index-linked bonds.

You have been concerned about credit markets – how will you benefit from that insight and why does it matter if I don't hold corporate bonds? We have exposure to credit default swaps, which will rise in value as credit spreads widen (ie investors price greater risk into corporate bonds). The rising tide of low interest rates and abundant liquidity over the last decade has led to a bonanza in corporate debt issuance as savers reached for yield. This tide is now receding. Many corporate bonds are illiquid and are held in vehicles promising daily or weekly liquidity; not a problem when flows are positive but deeply problematic when they reverse. A blow-up in corporate credit has wider implications – rising corporate borrowing costs will affect equity prices and the illiquidity of corporate bonds means that investors will turn to more liquid markets (equities) to de-risk if they cannot sell corporate bonds.

Why have you reduced exposure to Japanese equities? This was part of an overall reduction in equity exposure last year. The sales were focused on financial stocks as the biting point for global rates appears now to be lower than previously anticipated. However, the domestic story around Abenomics remains compelling. Corporate governance reforms and ROE targets are working. The most tangible impact has been rising dividends and share buybacks and we expect this to continue.

How has gold exposure changed in the last year? We increased exposure to bullion in July and then in September partially switched into gold miners. Both of these changes had a positive impact as the initial rise in the gold price was followed by a period of M&A in the sector.

Please note that Ruffer SICAV is a Luxembourg UCITS and subject to Luxembourg law. Ruffer SICAV is authorised by and subject to the supervisory authority in Luxembourg, the CSSF, and is a scheme recognised by the UK's Financial Conduct Authority (FCA). Ruffer Total Return International (RTRI) is not registered for distribution in any country other than Belgium, Finland, France, Germany, Ireland, Italy (qualified investors only), Luxembourg, the Netherlands, Portugal, Singapore (institutional and accredited investors only), Spain, Sweden, Switzerland (qualified investors only) and the UK. The fund's prospectus is provided in English; Key Investor Information Documents are provided in Dutch, English, French, German, Italian, Portuguese, Spanish and Swedish and are available on request or from www.ruffer.co.uk. Ruffer LLP is not able to market RTRI in other countries, except under certain exemptions. In line with the Prospectus, it is possible that at any one time Ruffer Total Return International may invest more than 35% of its assets in transferable securities issued or guaranteed by an EEA state, one or more local authorities, a third country or a public international body to which one or more EEA States belong. The only aforementioned securities where Ruffer would currently consider holding more than 35% would be UK or US government issued transferable securities.

Investment objective

The investment objective of Ruffer Total Return International ('the fund') is to achieve positive returns with low volatility from an actively managed portfolio. The fund may have exposure to the following asset classes: cash, debt securities of any type (including government and corporate debt), equities and equity related securities and commodities (including precious metals). Pervading this objective is a fundamental philosophy of capital preservation.
