

# Ruffer Total Return International

Positive returns with low volatility

O class July 2015 Issue 49

During July the fund price fell by 0.2%. This compared with a rise of 2.4% in the FTSE All-Share Index and a gain of 1.6% in the FTSE Govt All-Stocks Index (both figures total returns in sterling).

Confusion reigned at the start of the month, as Greece lurched from rebellious referendum to apparent acquiescence but by the end of July markets had moved on, even if no one seems quite sure who has agreed to what. Greece has revealed underlying fault lines in the euro construct, cracks that could become more threatening if a larger economy were faced with similar problems less easily contained within the balance sheets of the authorities. It also highlights the unattractiveness of two of Reinhart and Sbrancia's five potential means of reducing a debt burden; namely austerity or restructuring/default. This leaves the options of (i) real growth, (ii) inflation or (iii) prolonged financial repression as realistic routes out of the mire of global debt. According to the BIS, global debt is now some \$200 trillion, up from \$142 trillion in 2007, and now 286% of global GDP compared to 269% in 2007. We feel it is prudent to protect both against inflation and financial repression through index-linked bonds, as well as having some exposure to the possibility that we might grow out of our debt problems (equities).

July saw extreme volatility in the local Chinese stock markets, with indices trading in a 28% range as the authorities attempted to command an orderly deleveraging. Meanwhile, the sharp fall in commodity prices, which, unlike Chinese equities, have no cushion of a recent boom against which to set current losses, inflicted further pain on the economies, companies and investors exposed to this area. The oil price fell about 20% and copper and soft commodities by 10%, moves which call into question the underlying strength of global demand, and by extension, the prospect of option (i) above (real growth) playing a leading role in any long term debt reduction. July's sell off also extended to gold bullion, down 6% in the month. Longer term gold may still play a protective role in the portfolio, especially if the US comes to tire of dollar strength, but for the moment it has few friends. With our long-dated index-linked bonds cast to play the lead role in any inflationary solution to the debt burden (options (ii) and (iii) above) our gold exposure has been reduced to below 3% of the portfolio, though we retain some upside optionality in the form of gold mining stocks.

Overall this month, markets recovered some poise, as the latest Greek crisis was deemed to have passed and commodity falls can be viewed either as warnings on future growth or as a boost to consumers' spending power. This leaves investors free to fret over the likely path of US and UK interest rates and the degree to which equity and bond markets are prepared for any rise, however small or well signalled. This looks set to be the topic du jour for the rest of this year, though history may view it as mere background noise in the story of our indebted times. All the same, holdings in UK banks should hopefully provide positive returns in the event that the UK economy maintains the momentum that would allow for Mark Carney and the rest of the MPC to raise interest rates.

\*Reinhart and Sbrancia, 'The Liquidation of Government Debt', National Bureau of Economic Research, 2011

Please note that Ruffer SICAV is a Luxembourg UCITS and subject to Luxembourg law. Ruffer SICAV is authorised by and subject to the supervisory authority in Luxembourg, the CSSF, and is a scheme recognised by the UK's Financial Conduct Authority (FCA).
