

LF Ruffer Absolute Return Fund

Positive absolute returns with low volatility

During January the fund price rose by 0.2%. This compares with a fall of 1.9% for the FTSE All-Share Index and a decrease of 2.0% for the FTSE All-Stocks Index (all figures total returns in sterling).

There is currently a tension at the heart of our analysis and this translates into the portfolio: on the one hand we are positive on the global economy, on the other, we are nervous about valuations and the technical fragilities we observe in financial markets.

The momentum of synchronous global growth across all economic zones in 2017 has carried over into 2018. Advanced economies are growing at rates last seen in the early 2000s. Several factors give us confidence this could be sustained for a while longer. Despite the US Federal Reserve raising rates, global financial conditions are getting easier, not tighter. This can be attributed to global quantitative easing, a weaker US dollar, rising equity markets and tightening credit spreads. There is a helpful fiscal tailwind across developed markets, given further impetus by President Trump's tax cuts. Labour markets are tightening gradually and we are seeing positive wage inflation. Lastly, a case can be made that we are at a favourable point in the inventory cycle with significant destocking over the last few years. It is for this reason we maintain our equity positions (albeit at an overall low weighting of 43%) and have focused on cyclical stocks.

With this rose-tinted outlook, investors might ask why we are not more bullish? The answer is our concern regarding valuations and technical stresses and skews in financial markets. Most investors accept, after nine years of zero rates and quantitative easing, that valuations across almost all asset classes have reached extraordinary levels. The wall of worry has been demolished and animal spirits are ablaze. Not convinced? Could we have experienced a cryptocurrency boom in the dark days of 2008 when trust in banks and fiat currency was at rock bottom?

The less obvious risk relates to investment behaviours that have evolved in recent years. Volatility is an obscure financial metric, having morphed from an observed output and barometer of financial stress, into a widely used input for many investment strategies. Goodhart's Law tells us 'when a measure becomes a target, it ceases to be a good measure'. We estimate at least \$1 trillion is, explicitly or implicitly, invested in assets using strategies designed to make money as volatility falls and leverages exposure to risky assets the more this continues. This self-feeding mechanism is inherently unstable and if events cause a reversal (ie a spike in volatility) the result could be a sharp sell-off in asset markets. This process is exacerbated by the rise of computer-driven trading models and passive investment, both of which are strictly rule-based and unthinking in execution. As such, it seems to us the seeds of the next financial crisis are in the fund management industry, not the banking system. The last few days of January may provide a hint of what is to come. Unlike bonds in 2008 or old-economy stocks in 2000, there are no conventional moneymaking protective assets in which to hide and thus, despite their uncomfortable cost of carry, believe our options and illiquid strategies to be absolutely essential.

The fund's prospectus and key investor information documents are provided in English and available on request or from www.ruffer.co.uk. Please note that LF Ruffer Absolute Return Fund is a UK UCITS and is not registered for distribution in any country other than the UK. In line with the Prospectus, it is possible that at any one time the LF Ruffer Absolute Return Fund may invest more than 35% of its assets in transferable securities issued or guaranteed by an EEA state, one or more local authorities, a third country or a public international body to which one or more EEA States belong. The only aforementioned securities where Ruffer would currently consider holding more than 35% would be UK or US government issued transferable securities.

Investment objective

The fund aims to achieve low volatility and positive returns in all market conditions from an actively managed portfolio of equities or equity related securities (including convertibles), corporate and government bonds and currencies. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any one or a number of twelve-month periods. The fund may also invest in collective investment schemes, cash, money market instruments and derivatives and forward transactions. Pervading this objective is a fundamental philosophy of capital preservation. In selecting investments the fund will adopt a stock picking approach and will not adopt any investment weightings by reference to any benchmark.
