LF Ruffer Absolute Return Fund

Positive absolute returns with low volatility

During December, the fund price fell 1.4%. This compared with a decline of 3.8% in the FTSE All-Share Index and an increase of 2.5% in the FTSE Govt All Stocks Index (all figures total returns in sterling). In a turbulent month our protective assets started to come into play. If we were to factor in the positive performance of the protective credit and volatility strategies, which did not price until after the month end, then the NAV would have fallen less than 1%. From where we stand a further market fall should see the fund perform well. That being said, we have failed in the last 12 months to deliver on Ruffer's raison d'être: namely to protect capital and deliver positive returns regardless of the direction of markets. That is disappointing and frustrating to us; more importantly it has been costly to our investors. The most striking factor about 2018 was the all-encompassing nature of the decline. Recent market volatility has not been an economic event (yet) but a financial market one: the global economy has been growing robustly with the US at the forefront. Yet a Deutsche Bank study demonstrated that more than 90% of asset classes posted losses in dollar terms for the year, a record since 1908. In December, not a single company managed to borrow money in the \$1.2 trillion high yield market and it will go down as the worst December ever for US stocks. Oil plunged 42% from peak to trough with no clear catalyst and President Trump scared the horses by engaging in trade wars and musing about firing the chairman of the Federal Reserve. For the first time in several years, Federal Reserve and Treasury communication policy hurt, rather than helped, the market.

We have our lowest allocation to equities since 2008, at 34%. Yet we have still sustained damage here. Our exposure was focused on cyclical businesses trading on low valuations, which we thought would best capture the benefits of economic growth. Low valuations did not soften the blow as these stocks fell in line with equity markets, but we remain confident that these investments will be well placed to capture any bounce. We have deliberately chosen to protect the portfolio from material declines, rather than buying expensive protection against bumps in the road. As such, the protective investments have only just begun to kick in, the exception being our investments against distress in credit markets - these performed well (up around 30% over the quarter) and we expect them to continue to deliver strong positive returns should the stresses we observe begin to manifest themselves more seriously. Looking into 2019, credit markets are likely to be the epicentre of the next crisis, but the effects will be felt more widely. The combination of option and credit market protection is a powerful one and should more than offset any losses in our relatively trim equity exposure. When combined with gold starting to show signs of life and index-linked bonds likely to contribute positively, this should allow us to be greedy when others are fearful. Lastly, if you are a European investor who has concerns about the uncertainty generated by Brexit on the structure of this fund, please contact Alexander Bruce (abruce@ruffer.co.uk).

I class December 2018 Issue 154

Investment objective

The fund aims to achieve low volatility and positive returns in all market conditions from an actively managed portfolio of equities or equity related securities (including convertibles), corporate and government bonds and currencies. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any one or a number of twelve-month periods. The fund may also invest in collective investment schemes, cash, money market instruments and derivatives and forward transactions. Pervading this objective is a fundamental philosophy of capital preservation. In selecting investments the fund will adopt a stock picking approach and will not adopt any investment weightings by reference to any benchmark.

Ruffer performance is shown after deduction of all fees and management charges, and on the basis of income being reinvested. Past performance is not a guide to future performance. The value of the shares and the income from them can go down as well as up and you may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange.

The fund's prospectus and key investor information documents are provided in English and available on request or from www.ruffer.co.uk. Please note that LF Ruffer Absolute Return Fund is a UK UCITS and is not registered for distribution in any country other than the UK. In line with the Prospectus, it is possible that at any one time the LF Ruffer Absolute Return Fund may invest more than 35% of its assets in transferable securities issued or guaranteed by an EEA state, one or more local authorities, a third country or a public international body to which one or more EEA States belong. The only aforementioned securities where Ruffer would currently consider holding more than 35% would be UK or US government issued transferable securities.
