

WS Ruffer Total Return Fund

SHARE PRICE PERFORMANCE SINCE LAUNCH ON 27 SEPTEMBER 2000

May continued where April left off. Attention remained focused on the conflict in the Middle East and the ongoing melt-up in the AI trade. Despite the volatile news flow, the oil price tumbled by nearly 20% as investors ended May more hopeful for a sustainable resolution to the conflict. It was another healthy month for global equities, with the S&P 500 posting its ninth consecutive weekly gain at the end of the period. Markets were led yet again by the beneficiaries of vast AI-related investment, best illustrated by the performance of semiconductor and memory stocks. The portfolio's equities contributed positively over the month, led by its Japanese exposure, but faced a headwind from its holdings of Chinese tech companies, which fell over the month. Given the broadly favourable environment for risk assets during May, the largest detractor from performance came from the protective derivative positions.

It was a volatile month for global bond markets, as inflation concerns – stemming from the conflict in the Middle East – intensified before easing as the oil price later retreated. We added modestly to our existing exposure to long-dated Japanese government bonds after the 30-year yield breached 4%. The gilt market endured acute worries of its own, as the embattled prime minister faces mounting pressure from his own party after dismal local election results. Despite the press fervour, a change of leadership is far from certain, and it is a risk we are monitoring. Should Starmer be forced out, a plausible scenario is a shift further to the left on economic policy, which could weigh on the fiscal outlook and, in turn, on gilts. The additions we have made to bonds this year have been opportunistic, where we felt sufficient value has emerged. We remain convinced that the bedrock role bonds served in investor portfolios over prior decades is now over, and we continue to search for additional, more reliable sources of diversification and protection.

Elsewhere, we added 5% to the fund's US dollar exposure and increased our positions across a selection of agricultural commodities, seeking to reinforce the portfolio's resilience should the oil price rise. These changes complement our existing exposure to energy and to derivatives. With both Iran and the US reluctant to be seen backing down, the stand-off is likely to persist. Oil inventories have so far been drawn down more slowly than analysts had expected, but they continue to diminish. We see a meaningful risk that energy prices move higher from here. Any sustained rise would, in time, bring its own demand destruction and pain for financial markets. The portfolio is positioned to protect should that risk come to pass.

One to twelve month performance figures are cumulative, all others are annualised. Source: Ruffer LLP, Bloomberg. The comparator benchmark shown in this document is as stated in the fund's prospectus. I acc share class performance includes data calculated prior to the inception date, 3 November 2004, based upon a simulated/extended track record using the track record of WS Ruffer Total Return Fund O acc. Ruffer performance is shown after deduction of all fees and management charges, and on the basis of income being reinvested. Past performance is not a guide to future performance. The value of the shares and the income from them can go down as well as up and you may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange.

INVESTMENT OBJECTIVE

To seek to achieve positive returns in all market conditions over any 12 month period, after all costs and charges have been taken. Underlying this objective is a fundamental philosophy of capital preservation. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any 12 month period.

GLOSSARY

Volatility measures the extent to which returns vary over a given period. High volatility means returns have been more variable over time

Duration measures the sensitivity of a bond or fixed income portfolio's price to changes in interest rates. The higher the duration, the more sensitive the price or portfolio is to changes in interest rates

UK Bank Rate the rate the Bank of England charges banks and financial institutions for loans with a maturity of one day

Sharpe ratio measures the performance of an investment, adjusting for the amount of risk taken (compared to risk-free). The higher the ratio, the better the returns compared to the risk taken

Sortino ratio measures the extra return an investment makes for each unit of bad risk (the chance of losing money below a certain target)
