

TM Ruffer Portfolio

Positive returns with low volatility

During March, the fund rose price from 101.56p to 102.90p.

Operation Stable Door began in earnest during March as the Federal Reserve raised interest rates for the first time in four years to try to contain inflation running at a near-half century high of 7.9%. Government bond yields moved abruptly to price in the most aggressive interest rate hiking cycle since 1994. Global bonds have just endured their worst quarter ever despite war, pestilence (covid disruption in China) and growing fears of a recession. So much for conventional bonds acting as a 'safe haven'. This should not come as a surprise to regular readers of this report, as we have written about the vulnerability of conventional bonds for some time.

What was the impact on the fund? The fund successfully navigated the first three months of this year as both equities and bonds ended up in negative territory. During March long-dated inflation-linked bonds ('linkers') fell in value as yields rose faster than inflation expectations, but our interest rate options – which profit from rising yields – more than offset this fall in value. Active duration management via derivatives continues to be essential to the fund's resilience in a rising yield environment. Long linkers remain a key holding for the world we are heading into and so this balance will be maintained.

While fixed income volatility hasn't been this high since the global financial crisis, equity markets look increasingly complacent, with many recovering all losses since the start of the Ukraine war. We trimmed equity exposure to 35% reflecting greater uncertainty and profit taking in some equity derivative protections. Overall, equities were a positive contributor for the month, with energy stocks once again leading the charge.

Commodity markets continued to perform well with higher prices helping the Australian dollar, where we now have exposure of around 5%. In World war II, America was famously dubbed the 'great arsenal of democracy'. In the era ahead, Australia looks set to be the 'great arsenal of commodities' for western democratic states. On top of this, Australian pension funds may soon start to close their net short position in their domestic currency, adding a further kicker to the Aussie dollar. The allocation was funded from the US dollar.

Finally, we added 2% to bullion exposure. Gold exposure and gold mining equities were the largest positive performance driver during the month. Total gold exposure now stands at close to 10%.

Near-term the path ahead remains highly uncertain – as ever, we aim to be resilient whatever happens. Longer-term, covid and the Russia-Ukraine war mark successive great accelerations towards the more inflation-prone and volatile era ahead. We believe we have the right asset mix to deal with the challenges and capture the opportunities in this new regime.

Ruffer performance is shown after deduction of all fees and management charges, and on the basis of income being reinvested. Past performance is not a guide to future performance. The value of the shares and the income from them can go down as well as up and you may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange.

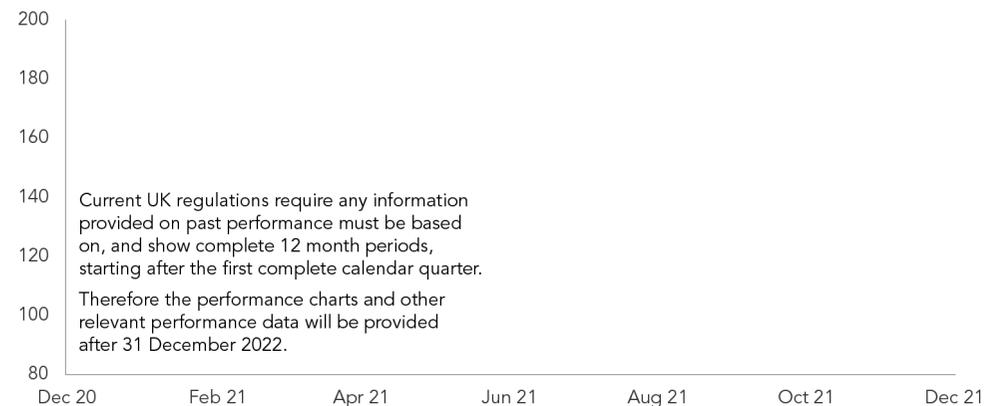

March 2022 Issue 4

Investment objective

To achieve positive returns over a 12 month period, after all costs and charges have been taken, regardless of market conditions. Underlying this objective is a fundamental philosophy of capital preservation. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any one or a number of 12 month periods.
