

WS Ruffer Diversified Return Fund

SHARE PRICE PERFORMANCE SINCE LAUNCH ON 15 SEPTEMBER 2021

March saw global stock markets hit fresh all-time highs propelled by a series of ‘Goldilocks’ assumptions: a ‘just right’ cocktail of robust US economic growth, no persistent inflation problem, and rate cuts to come. Last year’s maul of bears has nearly all capitulated. At the moment, a ‘no landing’ scenario in which the US economy never really slows down and global growth picks up seems plausible but would run the risk of more persistent inflation – especially if central banks remain committed to easing. US one-year breakeven inflation expectations have now doubled to 4% since the start of January.

Cyclical stocks and commodities have begun to shine as this more ‘reflationary’ dynamic emerges. Gold hit a new all-time high despite structural selling of gold bullion ETFs by western investors. Demand from non-Western central banks and consumers is now driving price action – a canary in the global monetary coal mine. Against this backdrop the fund made positive progress driven by its equity and commodity exposure. The latter includes gold mining equities alongside copper exposure. We added silver exposure over the month – now nearly 4% of the fund. Historically, silver lags gold, then outperforms. It also has a strong fundamental story: growing demand from the ‘electrification of everything’ married to unreliable supply given the nature and location of its supply. A partial recovery in our long-dated inflation-linked bonds also helped performance.

Performance detractors included the yen position, despite the Bank of Japan’s (BOJ) first rate hike in 17 years. Having rallied in expectation of the end of negative rates, the yen retreated as the BOJ declined to set out a clear path for future hikes. The yen remains historically cheap and will prosper if anything narrows the yield gap with Western central banks or causes a market shock. The absence of such a shock meant that our powerful derivative crash protections dragged, too. These are currently focused on equity market downside and credit default swaps.

We are not in the business of market timing, but the next few months will see a confluence of factors which could see hitherto bountiful liquidity retreat surprisingly quickly, causing a potentially sharp market drop. If so, our derivative protections will be key. Meanwhile, upside surprises in the path of rates and inflation or neglected geopolitical risks could also be unpleasant surprises for complacent markets. Beyond the significant tactical risks, we remain focused on the big picture. With the US government currently adding c \$1tn of debt every 100 days, investors are refocusing on central banks’ unofficial – but central – role: keeping government debt markets functioning and interest costs under control. If they have to choose between allowing more inflation or compromising financial stability, they’ll choose the former. The fund remains set up to protect and prosper in a rapidly changing world.

One to twelve month performance figures are cumulative, all others are annualised. Source: Ruffer LLP, Bloomberg. The comparator benchmark shown in this document is as stated in the fund’s prospectus. Ruffer performance is shown after deduction of all fees and management charges, and on the basis of income being reinvested. Past performance is not a guide to future performance. The value of the shares and the income from them can go down as well as up and you may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange.

INVESTMENT OBJECTIVE

To seek to achieve positive returns in all market conditions over any 12 month period, after all costs and charges have been taken. Underlying this objective is a fundamental philosophy of capital preservation. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any one or a number of 12 month periods.
